Board of Control.

HON. E. H. WASON, B. S.,	Nashua
HON. W. H. CALDWELL, B. S.,	Peterborough
PRES. E. T. FAIRCHILD, A. M., LL. D., <i>ex-officio</i> ,	Durham

The Station Staff.

EDWARD T. FAIRCHILD, A. M., LL. D., *President, ex-officio*.
JOHN C. KENDALL, B. S., *Director*.
FREDERICK W. TAYLOR, B. Sc. (Agr.), *Agronomist*.
B. E. CURRY, A. B., *Chemist*.
FRED RASMUSSEN, B. S. A., *Dairyman*.
W. C. O'KANE, A. M., *Entomologist*.
K. W. WOODWARD, A. B., M. F., *Forester*.
J. H. GOURLEY, B. S., *Horticulturist*.
O. R. BUTLER, PH. D., *Botanist*.
E. G. RITZMAN, B. S., *Animal Husbandman*.
W. H. WOLFF, M. S., *Assistant Horticulturist*.
T. O. SMITH, A. B., *Assistant Chemist*.
J. B. SCHERRER, B. S., *Assistant in Vegetable Gardening*.
FORD S. PRINCE, B. S., *Assistant Agronomist*.
C. H. OTIS, PH. D., *Assistant Botanist*.
HARRY P. YOUNG, B. S., *Assistant Agronomist*.
C. R. CLEVELAND, B. S., *Assistant Entomologist*.
C. W. STONE, A. M., *Farm Superintendent*.
JAMES MACFARLANE, *Florist*.

Assistants to the Staff.

MARTHA S. EMERSON, *Librarian*.
O. V. HENDERSON, *Purchasing Agent*.
BEATRICE M. RICHMOND, *Bookkeeper*.
LAURA B. BICKFORD, *Stenographer*.
ELIZABETH E. MEHAFFEY, *Assistant Librarian and Mailing Clerk*.
BEATRICE E. CARLISLE, *Stenographer*.

SEED TESTS.

MADE SEPTEMBER 1, 1914, TO SEPTEMBER 1, 1915.

The provisions of the Pure Seed Law enacted by the General Court in 1909, require the publication annually of a bulletin showing the results of all seed tests made officially during the previous year. The administration of this law is in the hands of the State Commissioner of Agriculture, who has appointed the writer, Agronomist of the Experiment Station, as his regular agent for making all tests and analyses in this state.

During the year ending September 1, 1915, forty-two samples of seed were voluntarily sent in for analysis. In addition to these, an authorized representative collected eighty, making a total of 122 samples submitted for analysis during the year.

The samples sent in by the collector were secured from nineteen dealers in sixteen different towns, representing nine of the ten counties of the state. These samples included 2 of alfalfa, 4 of alsike clover, 4 of white clover, 4 of barley, 14 of corn, 16 of millet, 3 of oats, 7 of red clover, 6 of redtop, 15 of timothy, and 5 of miscellaneous seeds.

A summary table showing the results of the examination of these 80 samples as regards their guaranteed percentage of purity and germination will be found on pages 13 to 15.

Of the 42 samples sent in voluntarily for examination, the writer has no knowledge that seeds represented by these samples were on the market. Quite frequently dealers and other individuals ask for a report upon the quality of a given sample and make the purchase of seed for their own use upon the basis of this report. It should not, therefore, be understood that seeds represented by all the samples inspected were offered for sale by the parties for whom the inspection was made.

In the testing and analyzing of seeds, just as in the chemical analysis of fertilizers, there are certain factors which make exact duplication of results impossible. There are always slight variations in drawing a sample of seed, in sampling the sample, in weighing small fractional parts of it, in the counting and identification of numerous seeds, etc.; there may be also fluctuations in the temperature and humidity of the germinating chamber which may affect the percentage of germination. Methods of analysis may also vary somewhat. For these reasons, a slight variation from the guarantee or standard or from a previous analysis should not be considered of consequence. It is our opinion that a variation of $1\frac{1}{2}\%$ for purity and 5% for germination should be regarded as within the limit of error and duplication.

The writer desires to acknowledge his appreciation of the careful and efficient work of Mr. W. A. Osgood, who assisted in making the tests and examinations of the samples herewith reported.

SEED EXAMINATION, 1915.

Sample number.	Kind of Seed, Sender, Date of Report, and Kind and Number of Foreign Seeds found in One Pound.	Percent Pure Seed	Percent Weed Seed	Percent Other Grass Seeds	Percent Inert Matter	Percent Germination

* Below.

* In the germination of redtop, duplicate results are especially difficult to secure. In order, therefore, to allow for a reasonable variation, all samples which indicate a degree of vitality equal to the standard, 75%-80%, are simply marked "standard"; those testing above this standard are simply marked "above," and those testing below are simply marked "below."

From the tables on the three pages just preceding it will be noted that 68 of the 80 samples collected were guaranteed for purity and 66 for germination. In other words, 85% of the seed represented by the samples was sold according to the law as regards purity and 82.5% as regards germination. These percentages are higher than last year when they stood at 80 and 67%, respectively.

Of the total 68 samples which were guaranteed for purity, 52 of them or 77% were up to the guarantee. The remaining 16 samples ranged from .1% to 12.8% below the guarantee.

Of the 66 samples guaranteed for germination, 37 or 56% tested up to or above the guarantee. The remaining 29 samples tested from .5% to 59% below the guarantee.

Among the seeds tested this year, alfalfa, alsike clover, oats, red clover, and timothy, were on the average above the standard per cent. of purity, while barley, the millets, redtop, and white clover were on the average below the standard per cent.

As regards the per cent. of germination of this year's seeds all of them, with two exceptions, were, on the average, up to or above the standard per cent. The millets averaged just a little below the standard on account of the low test of several samples of old seed which were collected, while the average of the redtop was materially lowered by one sample of home-grown seed which tested only 15%.

There was found on the market this year one lot of white clover seed which was about 15% below the standard of purity and which contained at least sixteen different kinds of weed and other grass seeds.

LABELING.

The law does not apply to the common five and ten-cent packages of garden and flower seeds. Only seeds sold in bulk or in packages of one pound or more are subject to the provisions of the law and are required to be accompanied by a guarantee stating their percentage of purity and vitality.

The guarantee or label may be of any form desired by the seller of the seeds, as a tag, sticker, or direct brand upon the container. It must, however, be plainly written or printed, and placed distinctly visible to the purchaser. Each dealer will provide his own labels.

TAKING OF SAMPLES.

To secure a fair average sample of a lot or bulk, take small quantities from all of the bags or from different parts of any particular bulk. Mix thoroughly and take out the sample to

be inspected. When the seeds are in bags or large bins, the use of a grain sampler is most convenient, since this will insure getting seeds from the top, middle, and bottom alike. Since the report of the analysis is based upon the nature of the sample inspected, it is important that the sample be carefully taken.

SIZE AND AMOUNTS OF SAMPLES.

The size and amount of the samples necessary for a test will depend upon the size and weight of the seeds. About one half ounce or a tablespoonful of the smaller grass and vegetable seeds, like alsike and white clover, redtop, lettuce, onions, radish, turnip, etc.; about one ounce or two tablespoonfuls of the larger seeds, like timothy, millet, red clover, alfalfa, rape, etc.; and about four ounces or a small cupful of the cereal grains or vegetable seeds, like oats, barley, corn, peas, beans, etc., should be sent.

TESTS AND EXAMINATIONS.

Section 2 of the law states the provisions under which the tests and analyses shall be made. The Commissioner of Agriculture has appointed F. W. Taylor, Agronomist of the Experiment Station, as the regular agent for making all tests and analyses in this state. The sellers or dealers who desire to base their guarantees upon tests made by themselves or their agents must first secure the approval of the Commissioner of Agriculture of the methods to be used in making the tests, and of the person who is to conduct them.

Although the law makes no provision for the expenses of the seed tests, the Department of Agriculture has arranged with the Experiment Station to have the tests made **free of charge** to all dealers and farmers resident in the state.

SENDING OF SAMPLES.

Samples sent to the Experiment Station for testing should be enclosed in a strong paper envelope and securely fastened. They should not be sent in bottles or glass jars owing to the danger of breakage. When a number of samples are to be sent they should be put up securely in a single package and forwarded either by parcel post or by express. Each sample sent in should be marked as follows:

Name and address of sender.

Date of sending.

Kind of seed.

Brand name (if any), and number of package.

Purity or germination test desired (one or both).

Write a letter stating the number and kind of samples sent so that their receipt may be promptly acknowledged.

Address all samples and communications regarding the same to F. W. Taylor, Experiment Station, Durham, N. H.

STANDARDS.

The law does not attempt to fix any standards as to purity and vitality, but for the information of those who may desire to know what may be considered as "equitable standards" the following table, offered by the U. S. Department of Agriculture, and based upon investigations made by that department, is given.

STANDARDS OF PURITY AND GERMINATION OF AGRICULTURAL SEEDS.

Seed.	Purity %	Germina- tion %	Seed.	Purity %	Germina- tion %
Alfalfa,	98	85—90	Kafir corn,	98	85—90
Asparagus,	99	80—85	Melon,	99	85—90
Barley,	99	90—95	Milletts,	99	85—90
Beans,	99	90—95	Mustard,	99	90—95
Beets,	99	*150	Oats,	99	90—95
Blue grass, Canadian,	90	45—50	Okra,	99	80—85
Blue grass, Kentucky,	90	45—50	Onion,	99	80—85
Brome, awnless,	90	75—80	Parsley,	99	70—75
Buckwheat,	99	90—95	Parsnip,	95	70—75
Cabbage,	99	90—95	Peas,	99	93—98
Carrot,	95	80—85	Pumpkins,	99	85—90
Cauliflower,	99	80—85	Radish,	99	90—95
Celery,	98	60—65	Rape,	99	90—95
Clover, alsike,	95	75—80	Redtop,	95	75—80
Clover, crimson,	98	85—90	Rye,	99	90—95
Clover, red,	98	85—90	Salsify,	98	75—80
Clover, white,	95	75—80	Sorghum,	98	85—90
Collard,	99	90—95	Spinach,	99	80—95
Corn, field or ensilage,	99	90—95	Spurry,	99	85—90
Corn, sweet,	99	85—90	Squash,	99	85—90
Cowpea,	99	85—90	Timothy,	98	85—90
Cucumber,	99	85—90	Tomato,	98	85—90
Eggplant,	99	75—80	Turnip,	99	90—95
Fescue, meadow,	95	85—90	Tobacco,	98	75—80
Lettuce,	99	85—90	Wheat,	99	90—95

* Each beet fruit or "ball" is likely to contain from 1 to 7 seeds. One hundred balls should yield at least 150 sprouts.
